UCLA Design | Media Arts  
Class of 2018 Senior Project

F • AUR • M  
*“form”*

F • AUR • M is as much a VR experience as it is experimental performance art. Combining frequential audio, gravitational physics, indeterminate scale, as well as light art, F • AUR • M lets the user create order or chaos at will while simultaneously allowing an audience to see the consequences of each decision. While the user has a confined space to experiment within, the audience is able to see a far more comprehensive view of the user's experimentation.

## Past Work:

### Duality

a series of portraits created using two sidelights to create a split color on the subjects face

### Beam

a series of portraits created with intense backlight, framing the subjects in colors they have chosen to match their individual personalities

## Luminescence

a series of long-exposure light paintings created in a single exposure without the use of digital manipulation

## Revolve

a series of long-exposure photos showing the apparent “paths of stars” created by stacking

## 1323 - Sleepwalking

a music video shot, directed and edited singlehandedly  
as proof-of-concept for future work with the up-and-  
coming pop duo, 1323
